2163

DATE MAILED: 07/25/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 10/727,863	Applicant(s) FALLIS ET AL.	
	Examiner Marilyn P. Nguyen	Art Unit 2163	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-23 is/are pending in the application.
- 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 1-23 is/are rejected.
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 04 December 2003 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. ____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. Claims 1-23 are pending in this action.

Claim Objections

2. Claim 11 is objected to: "element; including" is suggested to change to --element including--.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

3. Claims 1-23 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

As set forth in MPEP 21 06(II)A:

Identify and understand Any Practical Application Asserted for the Invention The claimed invention as a whole must accomplish a practical application. That is, it must produce a "useful, concrete and tangible result." State Street, 149 F.3d at 1373, 47USPQ2d at 1601-02. The purpose of this requirement is to limit patent protection to inventions that possess a certain level of "real world" value, as opposed to subject matter that represents nothing more than an idea or concept, or is simply a starting point for future investigation or research (Brenner v. Manson, 383 U.S. 519, 528-36, 148 USPQ 689, 693-96), 'In re Ziegler, 992, F.2d 1 197, 1200-03, 26 USPQ2d 1600, 1603-06 (Fed. Cir. 1993)34. Accordingly, a complete disclosure should contain some

Art Unit: 2163

indication of the practical application for the claimed invention, i.e., why the applicant believes the claimed invention is useful.

Apart from the utility requirement of 35 U.S.C. 101, usefulness under the patent eligibility standard requires significant functionality to be present to satisfy the useful result aspect of the practical application requirement. See *Arrhythmia*, 958 F.2d at 1057, 22 USPQ2d at 1036. Merely claiming nonfunctional descriptive material stored in a computer-readable medium does not make the invention eligible for patenting. For example, a claim directed to a word processing file stored on a disk may satisfy the utility requirement of 35 U.S.C. 101 since the information stored may have some "real world" value. However, the mere fact that the claim may satisfy the utility requirement of 35 U.S.C. 101 does not mean that a useful result is achieved under the practical application requirement. The claimed invention as a whole must produce a "useful, concrete and tangible" result to have a practical application.

The claimed invention is subject to the test of *State Street*, 149 F.3d at 1373-74, 47 USPQ2d at 1601-02. Specifically *State Street* sets forth that the claimed invention must produce a "useful, concrete and tangible result". The Interim Guidelines for Examination of Patent Applications for Patent Subject Matter Eligibility states in section IV C. 2 b. (2) (on page 21 in the PDF format):

The tangible requirement does not necessarily mean that a claim must either be tied to a particular machine or apparatus or must operate to change articles or materials to a different state or thing. However, the tangible requirement does require that the claim must recite more than a §101 judicial exception, in that the process claim must set forth a practical application of that §101 judicial exception to produce a real-world result. *Benson*, 409 U.S. at 71-72, 175 USPQ at 676-77 (invention ineligible because had "no substantial practical application").

Claimed invention (Claims 1-8) recites a method for assigning indexes to one or more index-based resources comprising providing, directing, identifying, preventing and allocating steps which do not provide useful, tangible and concrete results. These steps are constructed without practical application as to how/what is indexes being applied. Moreover, for it to be a tangible result, it must be more than just a thought or a computation. Instead, it must have real world value rather than being an abstract result.

Claimed invention (Claims 9-16 and 19-22) recites one or more computer-readable media that is defined in the Applicant's specification broader to read on communications media stored instructions in a modulated data signal. The modulated data signal refers to a propagated signal and a carrier wave. (Page 6, paragraphs [0020] and [0022]). Data signal is not a process, machine, manufacture, nor composition of matter, thus is a non statutory subject matter. Claim10 further fails to constitute to practical application of an abstract idea, for example, the claim directed to merely receiving, querying, denoting and communicating falls short of tangible and concrete result.

Claimed invention (Claims 17-23) recites "A system for preventing duplicate resource-index assignments in a communications networking environment", the system comprising an index-based-resource manager, a data store and a user interface which do not provide useful, tangible and concrete results. The index-based-resource manager, the data store and the user

Art Unit: 2163

interface are constructed without practical application. Moreover, the system comprises a data store without satisfying the useful result aspect of the practical application requirement.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 1, 10, 19 and 23 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 1, the claim is incomplete because there are no given steps to arrive the method for assigning indexes to one or more index-based resources. Moreover, the claim is incomplete as if the step of "identifying one or more indexes available to be allocated" is related to index based resource manager.

Regarding claim 10, the claim is incomplete because there are no given steps to arrive the method of managing resource indexes.

Regarding claim 19, there is insufficient antecedent basis for "said query". Moreover, the step of communicates an indication to a requesting component is incomplete because it's unclear what type of indication the claim conveyed.

Regarding claim 23, the claim is incomplete because it recites a method for allocating indexes to resources without any steps given to arrive that method.

Art Unit: 2163

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 1-4, 8-11 and 17-23 are rejected under 35 U.S.C. 102(e) as being anticipated by Teig (US 2003/0154210).

Regarding claim 1, Teig discloses a method for assigning indexes to one or more index-based resources (See page 8, paragraphs [0112-0115], page 10, paragraphs [0128], [0133], [0136-0139], [0141]) the method comprising:

- providing an index-based-resource manager (IBRM) (“index manager 720”, Fig. 7, and page 10, paragraphs [0140-0141]);
- providing a request for one or more indexes to be allocated to respective one or more resources (See page 8, paragraph [0113], “the query manager initially passes ...the received set of input functions to the indexer 515. This indexer translates each of the functions into an integer index into the database tables 525”, and page page 10, paragraph [0128], “the query manager uses a function T to specify the number of times that it should try to obtain sets of indices from the indexer”);
- directing said request to said IBRM (See page 8, paragraph [0113], wherein the request is passed to the indexer 515 which comprising index manager 720);

Art Unit: 2163

- identifying one or more indexes available to be allocated (See page 8, paragraph [0114], “the indexer 515 generates a set of one or more indices I from the set of one ore more functions F...identifies a set of one ore more sub-networks that realized the function of the query”, and paragraph [0141], “index manager 720...identify the index for the function of a single-function query...generate multiple indices for a multi-function query”);
- preventing said identified one or more indexes from being modified (See page 9, paragraph [0115], “the database tables use a relational data base scheme to store all sub-networks together with their associated indices...the sub-networks are stored in these table in an *encoded* form”, and page 15, paragraph [0193]); and
- allocating the identified indexes to be associated with said one or more resources (See page 10, paragraph [0138], “the generated set of indices can then be used to search the network database (like an ordinary relational database) for all entries (i.e., all sub-networks) that are associated (i.e., related) with each index in the generated set”, and paragraph [0139], “the generated set of indices is used to store the generated sub-networks during pre-tabulation and is used to retrieve pre-tabulated sub-networks during optimization”).

Regarding claim 2, Teig discloses wherein said one or more indexes are identifiers associated with said respective one or more resources (See Figs 15 and 16).

Art Unit: 2163

Regarding claim 3, Teig discloses wherein said one or more resources are network components of a computer network, including a communications network (See page 14, paragraph [0186], "sub-networks").

Regarding claim 4, Teig discloses wherein said network components include one or more selections from the following:

- a database table (See page 8, paragraph [0112], "sub-networks...are stored in the database table 525),

- a data-routing component;

- a switching component; and/or a signal-transfer component.

Regarding claim 8, Teig further discloses deallocating one or more indexes (See page 9, paragraph [0139], "the generated set of indices is used to store the generated sub-networks during pre-tabulation and is used to retrieve pre-tabulated sub-networks during optimization").

Regarding claim 9, Teig discloses one or more computer-readable media having computer-useable instructions embodied thereon for performing the method of claim 1 (See page 24, paragraphs [0318-0319]).

Regarding claim 10, Teig discloses one or more computer-readable media having computer-useable instructions embodied thereon for performing a method of managing resource

Art Unit: 2163

indexes in communications networking environment (See page 24, paragraphs [0318-0319]), the method comprising:

- receiving one or more requests to identify one or more indexes available for allocation wherein said indexes are to be respectively associated with one or more network resources (See page 8, paragraph [0113], “the query manager initially passes ... the received set of input functions to the indexer 515. This indexer translates each of the functions into an integer index into the database tables 525”, and page 10, paragraph [0128], “the query manager uses a function T to specify the number of times that it should try to obtain sets of indices from the indexer”);
- querying a data-storage component to identify a set of available indexes consistent with said request(s) (See page 10, paragraph [0138], “this indexer converts each function in the received query to an integer index into the database tables 525. The generated set of indices can then be used to search the network database (like an ordinary relational database) for all entries (i.e., all sub-networks) that are associated (i.e., related) with each index in the generated set”, and paragraph [0139], “the generated set of indices is used to store the generated sub-networks during pre-tabulation and is used to retrieve pre-tabulated sub-networks during optimization”);
- denoting the identified indexes as unavailable for subsequent allocation (See page 10, paragraphs [0128] and [0133]); and

Art Unit: 2163

- communicating said identified indexes to a requesting component (See page 12, paragraph [0169], “the index manager 720 then returns the generated set of indices to the query manager 505”).

Regarding claim 11, Teig discloses wherein said network resources include one or more selections from the following:

- a network element; including a switch, a router, a signal-transfer point (Figs. 3 and 4), a computer-processing component, or an office facility;
- a database table (See page 8, paragraph [0112], “sub-networks...are stored in the database table 525); and/or
- a call-routing path.

Regarding claim 17, Teig discloses a system for preventing duplicate resource-index assignments in a communications networking environment, the system comprising:

- an index-based-resource manager (IBRM) (“index manager 720”, Fig. 7, and page 10, paragraphs [0140-0141]) for receiving requests to manipulate indexes associated with one or more network resources;
- a data store coupled to said IBRM (network data storage 105, Fig. 1);
- a user interface coupled to said IBRM for communicating index data associated with manipulating said indexes (“input devices 2630, fig. 26 and paragraph [0320]).

Regarding claim 18, Teig discloses wherein said network resources include one or more selections from the following: a communications pathway, a database component (See page 8, paragraph [0112], "sub-networks...are stored in the database table 525), a hardware element, or a logical data representation (See Figs. 3 and 4).

Regarding claim 19, Teig discloses wherein said IBRM includes a first set of computer-useable instructions embodied on one or more computer-readable media (See page 24, paragraphs [0318-0319]) that:

- queries said data store incident to a request to manipulate one or more of said indexes (See page 10, paragraph [0138], "this indexer coverts each function in the received query to an integer index into the database tables 525. The generated set of indices can then be used to search the network database (like an ordinary relational database) for all entries (i.e., all sub-networks) that are associated (i.e., related) with each index in the generated set", and paragraph [0139], "the generated set of indices is used to store the generated sub-networks during pre-tabulation and is used to retrieve pre-tabulated sub-networks during optimization");
- identifies a set of indexes consistent with said query (See page 8, paragraph [0114], "the indexer 515 generates a set of one or more indices I from the set of one ore more functions F...identifies a set of one ore more sub-networks that realized the function of the query", and paragraph [0141], "index manager

Art Unit: 2163

720...identify the index for the function of a single-function query...generate multiple indices for a multi-function query”); and

- communicates an indication of said identified indexes to a requesting component (See page 12, paragraph [0169], “the index manager 720 then returns the generated set of indices to the query manager 505”).

Regarding claim 20, Teig discloses wherein said IBRM houses said indexes (See Fig. 7).

Regarding claim 21, Teig discloses wherein manipulating said indexes includes allocating indexes to one or more resources (See page 10, paragraph [0138], “the generated set of indices can then be used to search the network database (like an ordinary relational database) for all entries (i.e., all sub-networks) that are associated (i.e., related) with each index in the generated set”, and paragraph [0139], “the generated set of indices is used to store the generated sub-networks during pre-tabulation and is used to retrieve pre-tabulated sub-networks during optimization”).

Regarding claim 22, Teig discloses wherein manipulating said indexes includes deallocating indexes to one or more resources (See page 9, paragraph [0139], “the generated set of indices is used to store the generated sub-networks during pre-tabulation and is used to retrieve pre-tabulated sub-networks during optimization”).

Art Unit: 2163

Regarding claim 23, Teig discloses a method for allocating indexes to resources, comprising employing the system of claim 17 (See page 8, paragraphs [0112-0115], page 10, paragraphs [0128], [0133], [0136-0139], [0141]).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 5-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Teig (US 2003/0154210), in view of Gruber (US 6,115,793).

Regarding claim 5, Teig discloses wherein identifying one or more indexes includes querying a data storage device that houses resource information related to said one or more resources (See page 8, paragraph [0105], "the network database 105...stores each sub-network completely along with full information about the logic function or functions performed by the sub-network" and paragraph [0114], "the indexer 515 generates a set of one or more indices I from the set of one ore more functions F...identifies a set of one ore more sub-networks that realized the function of the query").

Teig is silent as to teach wherein said resource information includes an indication as to whether an available index is currently in use. On the other hand, Gruber teaches resource information includes an indication as to whether an available index is currently in use (Fig. 5c and col. 5, line

Art Unit: 2163

58 to col. 6, line 39 and col. 10, lines 10-22, Gruber et al.). It would have been obvious to one having ordinary skill in the art at the time of the invention was made to include an indication as to whether an available index is currently in use into the system of Teig. The ordinarily skilled artisan would have been motivated to modify Teig per the above for the purpose of improving memory-access performance while still retaining the efficiencies provided that the prior allocations are maintained until no longer needed (See col. 6, lines 48-52, Gruber et al.).

Regarding claim 6, Teig/Gruber discloses wherein identifying one or more indexes comprises beginning a search for said one or more indexes from a predetermined index location (See col. 5, line 58 to col. 6, line 10, Gruber et al.).

Regarding claim 7, Teig/Gruber discloses wherein identifying one or more indexes comprises selecting said one or more indexes from a predetermined range of indexes (See col. 4, lines 41-64, Gruber et al.).

Allowable Subject Matter

8. Claim 12 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims and if all the 112 rejections are overcome.

Claims 13-16 are depend on claim 12 thus are objected as the same.

Conclusion

Art Unit: 2163

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Ashby U.S Patent No. 6,047,280 discloses interface layer for navigation system.

Aridor US Patent No. 7,043,472 discloses file system with access and retrieval of xml documents.

Kottomtharayil US 2005/0044114 discloses system and method for dynamically performing storage operations in a computer network.

Gajda U.S 2001/0056428 discloses method and system for improved access to non-relational databases.

Lee U.S 2003/0223393 discloses method and apparatus for multicast transmission of packet data in a mobile communication system.

Woolds U.S Patent No. 6,101,491 discloses method and apparatus for distributed indexing and retrieval.

Fenner U.S Patent No. 6,819,670 discloses data packet routing for mobile networks.

10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Marilyn P Nguyen whose telephone number is 571-272-4026. The examiner can normally be reached on M-F: 8:30 - 5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Don Wong can be reached on 571-272-1834. The fax phone numbers for the organization where this application or proceeding is assigned are 571-273-8300 for regular communications and 703-746-7240 for After Final communications.

Application/Control Number: 10/727,863

Page 16

Art Unit: 2163

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-305-3900.
